

3GF - 2013 og 2014

Teletech was sole supplier of technical equipment

Eigtveds Pakhus hosted the Global Green Growth Forum in 2013 and 2014. The 3GF team at the Ministry of Foreign Affairs selected Teletech as their technical team and supplier. Teletech has worked on Eigtveds

Pakhus for many years and therefore knows both the venue and the co-workers well.

Teletech provided technical project management and technical drawings, with detailed specifications related to type and number of technical devices in each room.

The solution also emphasized the use of the existing equipment in the venue. Our technical solution for

3GF consisted of f. ex. interpretation equipment, microphone systems, dome cameras, stage backdrops, audio equipment, projection and light. The equipment was used in the 10 meeting rooms.

We also installed a video-data information system so the participants could follow live transmissions and get information from the meeting rooms, as well see the day's meeting program. An information system consisting of multiple monitors was also set up for the participants to follow twitter messages about the conference.
